

On the Market

Just to clarify...

With moisture-rich soy extracts to enhance skin's natural glow, CVS/Pharmacy Clarifying Daily Cleanser's oil-free and soap-free formula lifts away dirt and make-up without drying out skin. The earthy-looking package is highlighted on top with a complimentary color-coordinated Colibri pump from SeaquistPerfect Dispensing.

Absolutely brilliant

Noevir Brilliant de Peau is an intensive skin renewal system, designed to help stimulate the skin's natural repair mechanisms and restore its youthful complexion. It quickly penetrates deep into the skin to deliver active ingredients where they are needed most. The kit consists of two types of serum: Essence for Rejuvenation (in a bottle) and Essence for Brightening (in a tube), both formulated for day and night use. AC-11, derived from Cat's Claw extract, helps promote skin's natural ability to repair itself. A combination of marine collagen, hyaluronic acid and amino acid (acetyl tetrapeptide-9) provides moisture retention, while stimulating the skin to boost its structural support—for a supple, well-toned complexion. Rose balsam and bergenia root extracts directly target discolored skin and age spots to promote a brighter complexion, along with vitamins C and E and gardenia fruit extracts from Minami Daito Island.

Hold tight

Infuzene is a vacuum infusion specific product, from industrial adhesives manufacturer Westech Aerosol Corp., that works by crosslinking with the infused resin to provide enhanced interlaminar shear strength. The vacuum infusion process (VIP) is widely used to create lightweight, durable fiberglass components for everything from boat hulls and wind turbine blades to high performance racecar bodies and aerospace parts. According to the company, some general-purpose spray adhesives used to hold the layers of dry material together during the infusion process may, in some cases, act as a contaminant that may compromise the structural integrity of the part and lead to premature failure in the field. However, since Infuzene will not interfere with the curing process of vinyl esters, polyester or styrene resins, it allows resins to obtain maximum tensile shear strength. The adhesive crosslinks and hardens along with the ester or styrene resins to form an integrated structure.

Call of the wild

Primos Hunting Calls, with Excelda Manufacturing, introduced four new bag-on-valve (BOV) aerosols to their Silver XP Scent Eliminator product line for 2010. The products help offer hunters complete scent elimination coverage with continuous spray. The sleek new packages are available as Silver XP Scent Eliminator and Silver XP Scent Eliminator with Earth Blend in both a 14oz and 5.5oz size.

The new BOV 14oz package features a 211x713 two-piece can from DS Container. The spray-through cap is a custom color Twist Lock from SeaquistPerfect; the four-color process, full shrink sleeve label with perforation at cap is from CL&D. The new 5.5oz package features a 45mm x190mm aluminum can from CCL; custom color, hoodless locking Moritz actuator from SeaquistPerfect and shrink sleeve from CL&D.
